

‘API’ SUBFOLDER

File Name	Summary
SunshineSpend HCP Lookup API Reference	This document provides a mini-reference for the SunshineSpend HCP Lookup API, detailing its overview, endpoint, supported HTTP method (POST), request parameters (last_name, first_name, npi, license_number, specialty, limit), and response fields (npi, first_name, last_name, primary_type, specialty, license_states, license_numbers). It also includes notes on how results are grouped and aggregated, and provides curl examples for testing the API.
HCP_Lookup_API.yaml	This is an OpenAPI 3.0.0 specification for the SunshineSpend HCP Lookup API. It defines the `/hcp_lookup.php` endpoint, which supports POST requests for searching physicians and practitioners. The specification details the request body properties (last_name, first_name, npi, license_number, specialty, limit) and the structure of the successful JSON response, including an example.
